

SONHART

TESTING MACHINE

Sorted according to hard, soft or undefined

Easy changing of the coil

Stabilization of the products with spinning rollers

SONTEC
quality for success

SONHART

TESTING OF SERIAL PARTS

With the SONHART automatic testing machine the hardness of rotationally symmetrical parts can be tested. The series parts are conveyed through a coil and then tested. Finally, the series' components are then arranged in order of hard, soft, or undefinable.

INSPECTION TECHNOLOGIES

✓ Eddy current method with test coil

Operation

Swivelling terminal with touch screen, keyboard & mouse

Produkte

Rotationally symmetrical parts up to 30x60mm

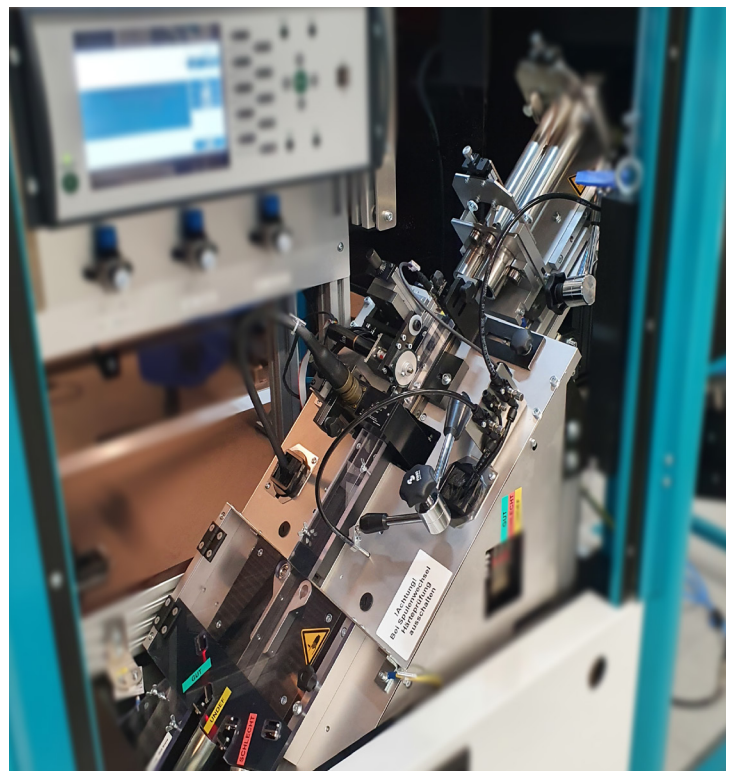

Performance

Maximum output 150 pcs/min

Vorzüge

Reliable inspection regarding hard/soft/undefined
